### Prices continued to rise and set records as market strength shifted towards higher-end.

While average and median sales price rose to near-record levels, comparisons with the same period two years ago, before the pandemic, showed more significant gains. This difference in performance was reflective of the weak conditions that existed at the high-end of the market in 2019. This quarter's median sales price rose by 8.3% year over year to \$1,300,000, the third-highest on record, but was 51.7% above the same period two years ago. Average sales price followed the same pattern. Besides the shift towards larger properties, a key driver

of price growth has been the chronic lack of listing inventory. Market supply plummeted 41.3% year over year to 1,081, the third-lowest on record and 58% below the same period two years ago. Listing inventory had been falling year over year for eight straight quarters, finally restraining sales. The number of sales fell 34.6% to 397, the first annual drop in five quarters. The decline in activity reflected a lack of supply, as evidenced by the 26.7% market share of bidding wars. More than one out of four sales in the quarter closed above the last asking price.
